

Bitcoin Group Ruby Developer

Job Description

You will be working in:

- a talented and pioneering engineering team in Melbourne's CBD
- a team who is building out the future of the blockchain ecosystem in Australia.
- an agile environment and results driven team.

Qualifications (necessary skills and experience required):

- 3+ years Ruby development experience
- Experienced in Ruby on Rails (a github account or equivalent to show some of your own work would be beneficial).
- Degree in Computer Science or equivalent
- Excellent communication skills
- Experience with Linux and PHP will be highly regarded.
- Familiar with SCRUM practices
- Passionate about being part of a bleeding edge technology company with BIG growth ambitions
- A basic understanding of Bitcoin and Blockchain technology and why it's important

Bitcoin Group

Bitcoin is an early-stage technology misunderstood by many and used by a small percentage of the world. The possibilities for disrupting the Banking and Finance industries are endless - it can connect the billions of unbanked in the world to the global economy and help online content creators efficiently get paid directly from their fans.

As Australia's largest, most capitalised and profitable company in the Blockchain/Bitcoin industry, We are building world class Bitcoin companies that:

- Make Blockchain technology more useful through building out middleware and application layer systems that leverage predominantly the Bitcoin and Ethereum Blockchains
- Contribute to decentralising the infrastructure layer by securing the underlying Blockchain on the Bitcoin network through the process of Bitcoin Mining

Who we are:

Bitcoin Group is an industry pioneer and champion of the Bitcoin and Blockchain ecosystem. We sponsor Australia's only Bitcoin and Blockchain focused co working space. We operate 6000 ASIC Bitcoin Mining machines covering 7 facilities across 3 countries (Australia, China and Iceland) currently representing 0.5% of the global Hashrate Output for the Bitcoin Network.

Our management teams solid reputation within the Bitcoin Industry enables us to build a profitable and cashflow positive operation, underpinned by not only having access to the most cost effective Bitcoin Mining equipment on the market, but also access to the most reasonable rates of electricity around the world.

What we do:

Bitcoin Mining is the activity of securing the Bitcoin network by verifying the validity of all transactions in the blockchain. An infrastructure layer activity, it represents a 500 million dollar annual opportunity at current market value, and is therefore is currently the most provably profitable segment within our industry. This is only the beginning with the potential of the underlying blockchain technology having far reaching implications for disrupting the banking and finance industry through the likes of digital wallets, remittance, currency exchange, ATMs and point of sales platforms.
